TEMPLATE LITERALS

TEMPLATE LITERALS

TEMPLATE LITERALS

- 👉 template literals are an **ES6 JavaScript feature**.
- 👉 which allows us to very easily create strings that contain some JavaScript variables or expression inside of a string.

```
1  const movie = getMovie(2);
2  const {title, director, reviews, genres} = movie
3
4  const summary = `${title} is a movie,
5    that was directed by ${director}`;
6
7  summary //Interstellar is a movie... directed by Nolan...
```

DESTRUCTURING OBJECTS AND ARRAYS

USING JS EXPRESSION

```
1  const movie = getMovie(2);
2  const {title, director, publicationDate} = movie
3
4  const summary = `${title} is a movie,
5    that was directed by ${director} ,
6    and published in ${publicationDate.split('-')[0]}`;
7
8  summary
9  //Interstellar is a movie... directed by Nolan...
10 // published in 2014
```

SEE YOU SOON...
